TPB460CCT	TPB 60W 6000lm 35-40v 1500ma 3/4/6.5 K-K F/Free RA80 PF90 5yr 595x 1195mm	

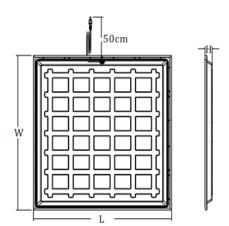

- TP(b) Fire Rated Materials
- CCT Switchable colours 3000K / 4000K / 6500K
- CRI90 Ultra smooth even Light Distribution, precise optical PMMA lensed diffuser
- Supplied with 40W / 60W Flicker Free, efficient PF>0.90 Prewired Power Driver
- White powder painting Treatment, Metal Plate 0.32mm T anti corrosive, 92% Reflective rate
- Solid non-Bending materials
- 13.5mm Diameter PMMA Lens, 14mm x 0.8mm PCB, Low voltage drop, High Heat dissipation
- 5 Year Warranty. 50000hr
- 220V-240V
- 50CM Connector cable
- Photometric / IES Data
- View / Beam Angle 120° CRI 90 UGR19
- UKCA / TP(b) Approved
- Recessed or Suspension Mountings
- High Quality components designed for commercial use

INSTALLATION AND WIRING INSTRUCTIONS

A qualified electrician is required to install make connections to LED Backlit Panel Light. The following instructions should be read

carefully before commencing installation. Failure to implement procedure below will invalidate the warranty.

General Notes

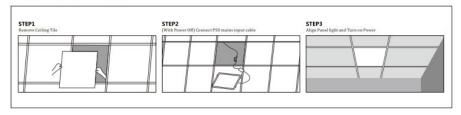

- Ensure 220-240V supply Voltage
- This unit must be installed by a professional Electrician
- Switch off supply before servicing
- The Panel light is an Extra Low Voltage (ELV) Unit. It requires an ELV power supply unit (PSU) to operate. Mains must only connect to the PSU.
- For safety reason this unit must not be modified in any form. This may also invalidate the warranty.
- Power drivers must not be placed directly on top of Panel Light.
- IP44Rated Cleaning: Non-Chemical, using wrenched damp piece of cloth.

- PSU Input:220-240V (non-dimmable) 50/60Hz Max 0.3A Non Flicker
- CRI80 PF>0.9 120+10° View Angle
- Output:25V-40V 40W /60W 55V(max) 960ma Constant Current Input
- Cable Length: 500mm
- PSU AC wires 2x0.75mm² 12cm length, DC wires 2x0.5mm² 12cm length

Installation & Operating Instructions

Universal Remote Emergency Pack

For use with LED Modules only

Product Specification

- Mains voltage:

- Power Consumption (Excluding external Driver):

- 2 x user-serviceable internal fuses:

- Emergency output voltage range:

- Emergency Duration:

- Battery:

- Ambient temperature range:

- Min/Max Conductor sizes:

- Weight

- Charging time:

- Protection class:

- Degree of protection:

- Em module complies with:

- Suitable for installation to EN50172 and BS7671

230V +/- 10% 50 - 60Hz

4VA

'T' 2A 5x20mm (See product label)

(See product label) (See product label)

+5°C to +35°C 0.5-4mm²

0.7kg

24 hours

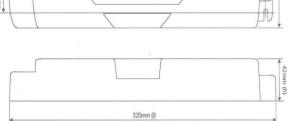

UL94 V0 Polycarbonate

BS EN 61347-2-7/2-13

The emergency pack requires 2 live feeds, a permanent supply for charging the battery pack and 1 for switching the lamp on and off . 305.5mm (Fixing centres)

NOTE - To comply with regulations, installation must be carried out

by a suitably qualified, competent person and in accordance with the current IEE wiring regulations (BS7671) and building regulations.

> For use with LED panels, arrays or down lights of compatible voltage.

> 3-pole isolation of lamp & mains driver power during emergency

> Emergency output power (Typical) : 3W (3-cell) and 4W (4-cell)

> Contains replaceable 4Ah Nickel Cadmium (NiCd) or 4Ah Nickel Metal Hydride (NiMH) battery (See product label)

The unit provides reinforced insulation between the mains supply and battery charging circuit and employs self-resetting protection against short-circuit of battery terminals. Normal charging will resume automatically once a fault is removed.

Emergency Lighting 'standard' or 'manual' Test

The following minimum inspections and tests should be carried out:

Switch off the mains power supply to the lighting unit. Inspect all emergency lights for satisfactory operation. Any defects should be noted and actioned by a competent person as soon as possible. Yearly

Switch off the mains power supply to the lighting unit. Leave the unit to run for the rated period (e.g. three hours). The lights should remain operable from the battery for the whole period.

Please be aware that further inspection / testing may be required, e.g. by risk assessment / local legislation.

installation!

Batteries and Disposal The internal battery has a design life of 4 years and must be replaced in

a timely manner to ensure the integrity of the emergency lighting

correct disposal. Alternatively, they may returned directly to an authorized treatment facility at the customer's cost.

it no longer provides the rated duration (3 hours). The manufacturer of the enclosure is committed to fulfil its obligations as a producer of batteries used in emergency lighting applications. Endof-life batteries may be returned to the remote enclosure manufacturer at the customers cost and arrangements will be made to ensure their

system is maintained. In any case, the battery should be replaced when

Installation Ensure the mains supply is isolated before attempting

> External battery connector for simple isolation

> 1 or 3-hour autonomy (See product label)

> Battery connectors are polarity protected

Please refer to page 2 of this leaflet for mains supply, driver and lamp connections. Once wiring is complete, use both internal cable clamps to secure cables in place. To prevent unauthorised access, ensure the lid is fixed in place using the screw on the base. If external plug and socket connectors are used without means to prevent accidental disconnection, the remote box should be sited so that it is protected from unauthorised disconnection. A recessed mount can be found inside the packaging carton to assist

installation of the indicator LED. A 14-16mm hole should be drilled in the required location so it is visible during normal use. Once installed, the indicator LED will be illuminated and the supply should be left undisturbed for a minimum of 24 hours to charge the batteries before attempting a commissioning test. After a successful test, the date should be noted on the space provided on the battery.

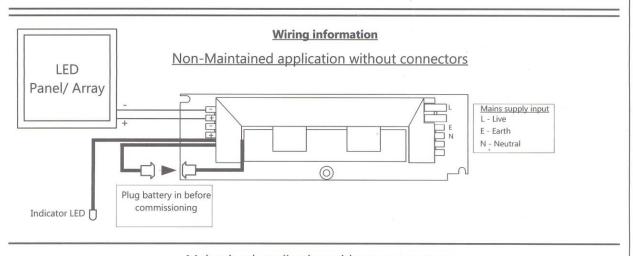

Standard / single colour (green) shows the following condition: A green LED shows the following conditions:

- LED green: mains OK and battery connected
- LED off: Mains failure [below 160V], battery disconnected/ battery faulty or faulty unit.
