Planning Exterior Lighting

Outdoor garden lighting can be used to create a visual impact.

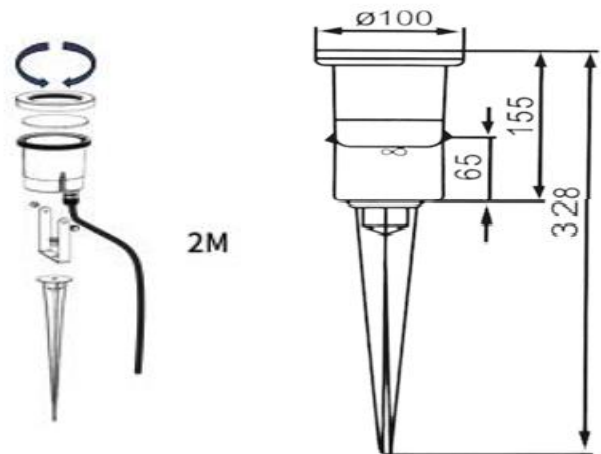

Utilise the fittings to illuminate areas of work where task lighting is required, such as entrances, paths, patios, garages and sheds along with more decorative parts of the garden where you might have accent lighting, including plants, trees or sculpture. For plants warm white light is recommended. Cool White lamps are recommended for rocks, sculptures etc.

Installation:

- These fittings are merely suitable for LED type GU10 lamps.
- Make sure that these lights are fitted to RCD/RCBO lighting protected circuit.
- Switch off supply before servicing.
- Ensure that cables are protected from potential damage.
- Only use external connection boxes for external joints.
- These fittings are non-submersible fittings, do not use in ponds.

If any doubt, please contact Deltech Technical Department.
